ROOM365

Room365 is a quick, customisable facilities and equipment management system for meeting rooms. Integrating with Outlook, it enables users to book catering or facilities for the room after arranging the meeting. The system can be deployed as a simple Outlook and SharePoint add on, or expanded into full integrated tablet devices to provide room booking through the app.

How it Works

User books meeting natively in Outlook

Room365 emails customer to notify them meeting is accepted, with invitation to book equipment

Customer uses Room365 interface to request any catering or facilities

Room365 workflow sends catering request for approval

Once approved, end user and any suppliers are notified

User's meeting is now fully equipped and catered for
