nimos Social Care Manager is a case management solution which uses bespoke applications, combined with the Microsoft stack to offer significant benefits to organisations. Remote working applications support external meetings and home visits, along with rich data analysis and reporting functionality, containing the latest developments. Users are able to interact with cases and data on the move through the use of a mobile application connected to a central hub of information.

A bespoke mobile application is available for staff to access and update case information while undertaking home visits, external meetings or working at court

The app can be used to ensure information is immediately available or updates can be instantly shared with colleagues, so that all staff have the most up-to-date information at their disposal.

The case management system holds all sensitive information in one place, meaning cases can be updated or shared with ease

This also means information is not lost when a client moves between teams, as case responsibility can be reassigned within the system. All data is held securely in the government approved Microsoft Cloud.

Through a tailored analytical tool, dashboards and reports are available to enable users to quickly spot trends, identify growing risks and deep dive into data

This gives critical insight to inform operational and strategic decision making. These reports range from high level reports on the progress against key performance indicators to low level, operational reports.
