BUILDING SECURITY

Following a review carried out by the Police National Enablement Program (NEP), risual were engaged by a Police Force to remediate aspects of their current NEP implementation to bring them in line with current recommendations and to provide a compliant environment/solution.

The Force were aligned to NEP design legacy **version 6**. The Force were also yet to implement sensitivity labels, policy and client as per DR2 requirements. risual worked with the Force to configure Azure Information Protection as per NEP Design DR2 V3 Section **6.2.1** and **6.2.2**.

This is a repeatable project for Police forces within the UK, and other public sector organisations, making it now more than ever to begin investing in a secure environment.

AZURE INFORMATION PROTECTION (AIP)

Azure Information Protection (AIP) will help Forces to classify, label, and protect their documents and emails. A global AIP policy is enabled by default in Azure AD. This default policy should be reconfigured to form the global baseline AIP policy that Forces will implement.

Forces will first apply the NEP defined baseline AIP label configuration using the AIP management blade in the Azure Portal before migrating to Sensitivity labels in the Microsoft O365 Compliance portal. Forces will delete/remove the default Microsoft classification labels and replace with ones defined in this design.

MAXIMISE MICROSOFT 365 INVESTMENT

Microsoft continue to invest approx. \$1 billion into cloud security each year. When using Microsoft Security products, you get the benefit of both the ever-improving AI and the human expertise. The Force already have Microsoft 365 (M365), providing a perfect platform to maximise its existing investment.

risual configured Azure Information Protection, which supports the Force's third party partnership and maximise the existing security features in the M365 environment. End users are now able to label office documents according to Information Classification policies in conjunction with NEP guidance. This solution has enabled protection of documents with pre-defined rights management permissions.
